SUMMARY

Backend engineer specializing in secure, multi-tenant ASP.NET Core APIs. Led a four-person team delivering **Collabrium**, a 290+ endpoint enterprise platform for project delivery, learning, collaboration and analytics. Builds with C#, .NET 8, SQL Server, EF Core and Clean Architecture, with CI/CD to Azure. **Ranked 1st** in the College of Engineering and Technology.

TECHNICAL SKILLS

Backend: C#, .NET 8, ASP.NET Core Web API, EF Core, LINQ, SQL Server, REST APIs, relational databases
Architecture & Security: Clean Architecture, CQRS/MediatR, SOLID, dependency injection, Repository/Unit of Work, multi-tenancy, ASP.NET Identity, JWT/refresh tokens, RBAC, policy-based authorization
Testing & Delivery: xUnit, Moq, AutoFixture, FluentValidation, Swagger/OpenAPI, Postman, Git, GitHub Actions CI/CD, Azure App Service, Azure SQL
Additional: SignalR, background workers, AutoMapper, Ollama/LLMs, React, TypeScript, JavaScript, C++, algorithms

SELECTED ENGINEERING PROJECTS

Collabrium | Team Lead & Backend Developer | **Code · API docs** Oct 2025 - Jun 2026

- Led a **four-person team** in two-week Agile sprints, turning requirements into API contracts for a 13-domain platform.
- Delivered **137 of 292 REST endpoints** across 15 controllers (auth, tenants, teams, projects, sprints, work items, reports, and notifications), separating domain models from EF Core entities and making migrations a controlled step.
- Secured every request with **tenant-resolution middleware, rotating JWT refresh tokens**, forced first-login password change and project-access policies, verifying account state, tenant membership and project rights before any handler runs.
- Enforced consistency by placing business rules and state transitions in domain models for projects, sprints, teams, tenants and 5 work-item types, **so no endpoint bypasses them;** e.g., User Stories ship only when linked Tasks, Bugs and Tests pass.
- Built **10 report types** (velocity, cycle time, project health, blocked/overdue work) with ScottPlot charts, reusable QuestPDF components and AI summaries; hardened AI suggestions with output validation, 3 repair attempts and fallbacks.
- Added SignalR hubs for live comments, presence and notifications, backed by persisted notifications and event-driven emails, so **offline users still receive every update.**

Hotel Booking Platform | Backend Developer | **Code** Dec 2024 - Jan 2025

- Built **52 REST endpoints** for search, booking, reviews, discounts and amenities, with availability/capacity validation, email confirmations and PDF invoices.
- Wrote **100+ xUnit tests** (Moq, AutoFixture) for booking rules, invoice calculations, authorization and transaction rollback.

Actify | Full-Stack Developer | **Code** Aug 2025 - Sep 2025

- Built a .NET 8 and React/TypeScript social activity app with Identity, CQRS, photo uploads and live SignalR comments; automated build and deployment with GitHub Actions.

PROFESSIONAL EXPERIENCE

Foothill Technology Solutions | Backend Intern Aug 2024 - Jan 2025

- Developed and deployed an Azure-hosted capstone API with **50+ endpoints** using Clean Architecture, FluentValidation, AutoMapper, automated tests, API documentation and GitHub Actions CI/CD.
- Completed structured C#, EF Core, ASP.NET Core, SOLID, design-pattern and unit-testing training via hands-on mini-projects.

Knowledge Academy | Full-Stack Intern Sep 2023 - Dec 2024

- Built and consumed ASP.NET REST APIs backed by relational databases; connected them to responsive React, JavaScript and Bootstrap interfaces.

EDUCATION

B.Sc. Computer Systems Engineering | Palestine Technical University - Kadoorie | Jun 2026

- **GPA 93.21/100; ranked 1st** in the College of Engineering and Technology.

ACHIEVEMENTS

- ICPC: 25th, Africa & Arab Girls Contest (2023).
- PCPC: 20th, Palestinian Collegiate Contest (2022).
- Problem Solving: 918+ Codeforces problems solved, and 120+ LeetCode problems solved.

LANGUAGES

- Arabic native.
- English B2-C1.
